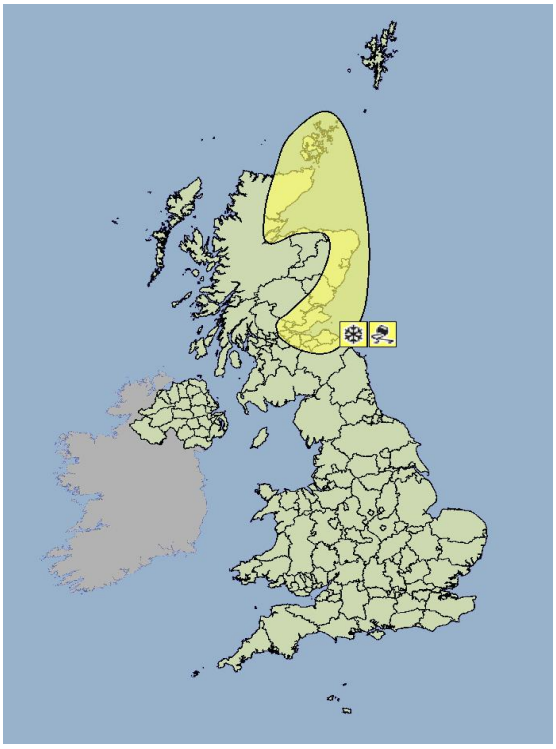
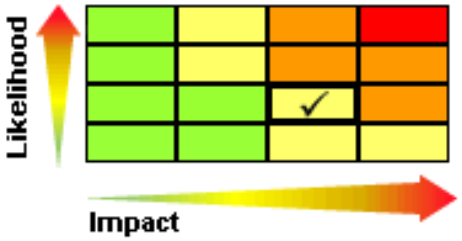
National Severe Weather Warning Service





Chief Forecasters Assessment
Frequent snow showers could continue to feed in from the North Sea on a cold easterly wind. Due to the nature of showers, some places are expected to receive an additional 2-5 cm of snow, whereas other places nearby might receive little or no snow. In some coastal areas, showers will probably begin to turn to rain and sleet, with the largest accumulations of snow inland.

This warning has been updated to extend it into Monday and to include the risk of icy stretches.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **00:05 on Sun, 04th Mar 2018** until **23:55 on Mon, 05th Mar 2018**

Snow showers are expected to continue over parts of eastern Scotland, bringing further accumulations of snow in places as well as icy stretches on untreated surfaces. Further delays to travel and public transport could occur, whilst some rural communities could become or remain cut off. Further impacts to power supplies/mobile phone coverage are also possible.
